CONTENTS OF VOLUME 173

NUMBER 1, AUGUST 15, 1988

Chromogenic Labeling of Milk Oligosaccharides: Purification by Affinity Chromatography and Structure Determination *Harry Towbin, Cora-Ann Schoenenberger, Dietmar G. Braun, and Günter Rosenfelder* 1

Detection of Gangliosides of the G_{M1b} Type on High-Performance Thin-Layer Chromatography Plates by Immunostaining after Neuraminidase Treatment *Johannes Müthing and Peter F. Mühlradt* 10

India Ink Staining of Proteins on Nylon and Hydrophobic Membranes *John H. Hughes, Kathy Mack, and Vincent V. Hamparian* 18

Reaction of Low Molecular Weight Aminothiols with *o*-Phthalaldehyde *Rajinder N. Puri and Robert Roskoski, Jr.* 26

Electrochemical Determination of Arylsulfatase Activity Using High-Performance Liquid Chromatography *Rita T. Bradley and Paul Manowitz* 33

Analysis of Sorbitol, Galactitol, and *myo*-Inositol in Lens and Sciatic Nerve by High-Performance Liquid Chromatography *Ichitomo Miwa, Motoya Kanbara, Hiroshi Wakazono, and Jun Okuda* 39

Diphenylamine-Colorimetric Method for DNA Assay: A Shortened Procedure by Incubating Samples at 50°C *Gerard J. Gendimenico, Pamela L. Bouquin, and Kenneth M. Tramposch* 45

Cellular Immunofluorescence: Quantification of Low Abundance Proteins *Pamela B. Moore and Stephen S. Morse* 49

The Spectrophotometric Determination of Nanomole Quantities of Chloride in Plant Tissue *C. R. Allen and Susan Allen* 54

Fluorescein Labeling of Fab' while Preserving Single Thiol *G. P. Der-Balian, N. Kameda, and G. L. Rowley* 59

Determination of Copper and Zinc in Serum and Whole Blood by Ion Chromatography *C. N. Ong, H. Y. Ong, and L. H. Chua* 64

New Preparation Method for 9-Anthryldiazomethane (ADAM) as a Fluorescent Labeling Reagent for Fatty Acids and Derivatives *Tsuguchika Yoshida, Atsuhiro Uetake, Hiroshi Yamaguchi, Noriyuki Nimura, and Toshio Kinoshita* 70

Purification and Characterization of Low-Molecular-Weight Beef Heart Proteolipids: Use of Fast Atom Bombardment–Mass Spectrometry for Identification *P. Boyot, E. Trifilieff, A. Van Dorsselaer, and B. Luu* 75

Development of a General Ligand for Immunoaffinity Partitioning in Two Phase Aqueous Polymer Systems *S. Jill Stocks and Donald E. Brooks* 86

Rapid and Quantitative Preparation of Cytoplasmic RNA from Small Numbers of Cells *Nicholas M. Gough* 93

Interference of 3-Hydroxyisobutyrate with Measurements of Ketone Body Concentration and Isotopic Enrichment by Gas Chromatography–Mass Spectrometry *Christine Des Rosiers, Jane A. Montgomery, Sylvain Desrochers, Michel Garneau, France David, Orval A. Mamer, and Henri Brunengraber* 96

Method for Identification of Intracellular Free Flavin Species in the Photosensitive Fungus *Neurospora crassa* *Lutz Scheideler and Helga Ninnemann* 106

Radicals from "Good's" Buffers *John K. Grady, N. Dennis Chasteen, and Daniel C. Harris* 111

Purification of Serum Amyloid A and Other High Density Apolipoproteins by Hydrophobic Interaction Chromatography
John G. Raynes and Keith P. W. J. McAdam 116
Large-Scale Isolation of Covalently Closed Circular DNA Using Gel Filtration Chromatography
Gregory J. Raymond, P. Kruger Bryant III, Arlen Nelson, and Jerry D. Johnson 125
Separation of Ricin A- and B-Chains after Dithiothreitol Reduction
Florence Emmanuel, Elisabeth Turpin, Annette Alfsen, and Jean-Pierre Frénoy 134
High Affinity Antibody from Hen's Eggs Directed Against the Human Insulin Receptor and the Human IGF-I Receptor
Charles A. Stuart, Robert A. Pietrzyk, Richard W. Furlanetto, and Allan Green 142
Development of an Oxyntomodulin/Glicentin C-Terminal Radioimmunoassay Using a "Thiol–Maleoyl" Coupling Method for Preparing the Immunogen
Philippe Blache, Alain Kervran, Jean Martinez, and Dominique Bataille 151
Does Copper(II) Ethylenediaminetetraacetate Disproportionate Superoxide?
Wayne F. Beyer, Jr., and Irwin Fridovich 160
An *in Vitro* Binding Assay for Angiogenin Using Placental Ribonuclease Inhibitor
Michael D. Bond 166
Subpicogram Determination of Malondialdehyde by Gas–Liquid Chromatography with Nitrogen Phosphorus Detector. I. Standardization
M. Beljean-Leymarie and E. Bruna 174
Determination of Glucose-6-phosphatase Activity Using the Glucose Dehydrogenase-Coupled Reaction
María Alegre, Carlos J. Ciudad, Cristina Fillat, and Joan J. Guinovart 185
Measurement of Specific Radioactivity of Tryptophan Labeled with Carbon-14 in Plasma by High-Performance Liquid Chromatograph with a Synchronized Accumulating Radioisotope Detector
Shigeo Baba, Jun-ichi Yamaguchi, and Masanobu Horie 190
Measurement of Specific Radioactivity by High-Performance Liquid Chromatograph with a Synchronized Accumulating Radioisotope Detector: Determination of Turnover Rate and Pool Size of Tryptophan in Rat
Shigeo Baba, Jun-ichi Yamaguchi, and Masanobu Horie 196
Coomassie Blue–Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis for Direct Visualization of Polypeptides during Electrophoresis
Hermann Schägger, Heinrich Aquila, and Gebhard Von Jagow 201

ERRATUM
Volume 171, Number 1, May 15, 1988: Anthony Tsarbopoulos, Gerald W. Becker, John L. Occolowitz, and Ian Jardine, "Peptide and Protein Mapping by ^{252}Cf-Plasma Desorption Mass Spectrometry," pp. 113–123 206

NUMBER 2, SEPTEMBER 1988

Review. Acetylene Inhibition of Metalloenzymes
Michael R. Hyman and Daniel J. Arp 207

Bioluminescent Microassay of Various Metabolites Using Bacterial Luciferase Co-immobilized with Multienzyme Systems
N. N. Ugarova, O. V. Lebedeva, and I. G. Frumkina 221
Evidence for the Presence of a Free N-Terminal Fibronectin 30-kDa Domain in Human Plasma by Quantitative Determination with an Indirect Immunosorbent Assay
Jan Škrha, Hartmut Richter, and Helmut Hörmann 228
A Stopped-Flow Assay for Glycogen Phosphorylase Appropriate to Measure Catalytic Activity at High Enzyme Concentrations
M. Company, J. Zuluaga, P. Martínez, and J. S. Jiménez 235
Identification of *Escherichia coli* Ribosomal Proteins by an Alternative Two-Dimensional Electrophoresis System *Dipak B. Datta, Li-Ming Changchien, Concepcion R. Nierras, William A. Strycharz, and Gary R. Craven* 241
Ca^{2+} Measurement with a Ca Electrode: Artifacts Due to Some Cardiotropic Drugs
Guy Berson 246
Protein Chemistry of the *Neurospora crassa* Plasma Membrane H^+-ATPase
U. Subrahmanyeswara Rao, John P. Hennessey, Jr., and Gene A. Scarborough 251
Effect of Buffer pH and Peptide Composition on the Selectivity of Peptide Separations by Capillary Zone Electrophoresis
Paul D. Grossman, Kenneth J. Wilson, Gordon Petrie, and Henk H. Lauer 265
Use of a Computer to Assay Motility in Bacteria
Brian M. Sager, Jeff J. Sekelsky, Philip Matsumura, and Julius Adler 271
Determination of Nitrilotriacetate in Biological Matrices Using Ion Exclusion Chromatography *René P. Schneider, Fritz Zürcher, Thomas Egli, and Geoffrey Hamer* 278
Discontinuous Polyacrylamide Gradient Agarose Gels Resolve a Wide Range of Restriction Fragments and Optimize the Efficiency of Nucleic Acid Transfer
Christopher L. Jones, Nancy J. Simpson, Vincent L. Waryas, and Michael G. Pappas 285
Characterization of Protein Spin Labeling by Maleimide: Evidence for Nitroxide Reduction
Janice R. Perussi, Maria H. Tinto, Otaciro R. Nascimento, and M. Tabak 289
Microsequence Analysis of Peptides and Proteins. IX. Manual Gas-Phase Microsequencing of Multiple Samples *Mitsuru Haniu and John E. Shively* 296
Purification of Outer Membrane Proteins of the Gram-Negative Bacterium *Neisseria gonorrhoeae* *Ralph C. Judd* 307
Detection of UDP-*N*-Acetylgalactosamine-Oligosaccharide *N*-Acetylgalactosaminyltransferase Activity in Rat Stomach and Human Serum by High-Performance Liquid Chromatography
Hitoo Iwase, Ikuko Ishii, Tohru Saito, Susumu Ohara, and Kyoko Hotta 317
Determination of Isopentenyl Diphosphate and Farnesyl Diphosphate in Tissue Samples with a Comment on Secondary Regulation of Polyisoprenoid Biosynthesis
Eveline Bruenger and Hans C. Rilling 321
Development and Testing of Radio and Enzyme Immunoassays for Acidic Fibroblast Growth Factor (aFGF)
Daniele Caruelle, Jacques Grassi, Jose Courty, Beatrice Groux-Muscatelli, Philippe Pradelles, Denis Barritault, and Jean-Pierre Caruelle 328
Concurrent Separation of Catecholamines, Dihydroxyphenylglycol, Vasoactive Intestinal Peptide, and Neuropeptide Y in Superfusate and Tissue Extract
Larry W. Hunter, Duane K. Rorie, Tony L. Yaksh, and Gertrude M. Tyce 340

The Measurement of Insoluble Proteins Using a Modified Bradford Assay
Simon M. Gotham, Peter J. Fryer, and William R. Paterson 353
Purification of a Murine Leukemia Inhibitory Factor from Krebs Ascites Cells
Douglas J. Hilton, Nicos A. Nicola, and D. Metcalf 359
Quantification of Gangliotetraose Gangliosides with Cholera Toxin
Gusheng Wu and Robert Ledeen 368
A Direct Nonchromatographic Assay for 1-Acyl-*sn*-Glycerol-3-Phosphate Acyltransferase *Ram Rajasekharan, Tapas K. Ray, and John E. Cronan, Jr.* 376
Two Strands of DNA Are Not Equivalent as Probes in Hybridizations at Low Stringency *J. Antoni Rafalski* 383
A Comparison of Fluorographic Methods for the Detection of ^{35}S-Labeled Proteins in Polyacrylamide Gels
Guang-Shing Perng, R. Dino Rulli, David L. Wilson, and G. W. Perry 387
Drop Dialysis: Time Course of Salt and Protein Exchange *Helmut Görisch* 393
Fluorescent Labeling of Nitrocellulose-Bound Proteins at the Nanogram Level without Changes in Immunoreactivity *Juan C. Vera and Coralia Rivas* 399
Two-Step Purification and N-Terminal Amino Acid Sequence Analysis of the Rat M_r 90,000 Heat Shock Protein *Marc Denis* 405
Development of Polyacrylamide Gels that Improve the Separation of Proteins and Their Detection by Silver Staining
Denis F. Hochstrasser, Abraham Patchornik, and Carl R. Merril 412
Methods for Increasing the Resolution of Two-Dimensional Protein Electrophoresis
Denis F. Hochstrasser, Michael G. Harrington, Anne-C. Hochstrasser, Mark J. Miller, and Carl R. Merril 424
Acyl-Coenzyme A:Cholesterol Acyltransferase Assay: Silica Gel Column Separation of Reaction Products
Magali Chautan, Elise Termine, Gilles Nalbone, and Huguette Lafont 436
Precipitation and Recovery of Proteins from Culture Supernatants Using Zinc
P. G. Zaworski and G. S. Gill 440
Addition of Ammonium Sulfate Improves the Specificity of the Assay for the Interferon-Induced Protein Kinase *Patricia Whitaker-Dowling and Robert Tomlinson* 445
Analysis of Horseradish Peroxidase-Amplified Chemiluminescence Produced by Human Neutrophils Reveals a Role for the Superoxide Anion in the Light Emitting Reaction *Ronny Lock, Agneta Johansson, Kristina Orselius, and Claes Dahlgren* 450
Resolution of Enantiomers of Hydroxyeicosatetraenoate Derivatives by Chiral Phase High-Pressure Liquid Chromatography
Dan J. Hawkins, Hartmut Kühn, Eric H. Petty, and Alan R. Brash 456
Chemical Degradation of ^{3}H-Labeled Substance P in Tris Buffer Solution
Toshinobu Higa and Dominic M. Desiderio 463

AUTHOR INDEX FOR VOLUME 173 470

The Subject Index for Volume 173 will appear in the December 1988 issue as part of a cumulative index for the year 1988.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in each July issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. **Simple histograms should be avoided. A table or a paragraph in the text is preferred.**

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5 × 7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162,** 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) *in* Methods in Enzymology (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

DIALOG. THINK OF IT AS A CATALYST.

og puts ideas in motion. It's the force changes the way you look at prob- and solutions. Maybe even previous theses.

We're the largest online knowledge- in the world. Our databases have hemical property, toxicity, regulatory patent information you need.

We have chemical substance, sub- ture and identification information e. Dialog also offers other databases ring molecular formulae, ring data properties.

But what really sets Dialog apart is thoroughly we cover so many differ- ent industries from chemistry to agriculture to biotechnology. We can make a big difference when a project demands more than chemical information. Since it's all on one service, you'll have what you need, quickly and easily.

With Dialog you get more than in-depth information. You get quality service and training.

We're reasonable, too. All you pay for is the time you spend using Dialog. There is no minimum usage requirement.

So when you need a catalyst to get ideas going, or to push them further, turn to Dialog. And watch how your mind reacts.

Ask your librarian or information center if your company has DIALOG. If not call 800-3-DIALOG (800-334-2564) today. Or write to us at, 3460 Hillview Ave., Palo Alto, CA 94304.

DIALOG® INFORMATION SERVICES, INC.

The world's largest online knowledgebank.

New Titles For The Active Researcher

ADVANCES IN CANCER RESEARCH

Volume 51

edited by

George Klein and Sidney Weinhouse

From the Reviews of Previous Volumes:

"This classic and essential series presents critical overviews on select aspects of both cancer research and the basic underlying science."

—AMERICAN SCIENTIST

"...excellent, highly informative, in-depth reviews....expertly written, up-to-date, and well referenced."

—JOURNAL OF MEDICINAL CHEMISTRY

CONTENTS: Advances in Human Retroviruses. Dehydroepiandrosterone and Structural Analogs: A New Class of Cancer Chemopreventive Agents. Transforming Growth Factor-β. Oncogene Activation in Chemical Carcinogenesis. The Intracisternal A-Particle Gene Family: Structure and Functional Aspects. The Etiopathogenesis of Prostatic Cancer with Special Reference to Environmental Factors. Immunologic Unresponsiveness to Murine Leukemia Virus Antigens: Mechanisms and Role in Tumor Development. Homing Receptors and Metastasis. Each chapter includes references.

1988, 424 pages, $85.00
ISBN: 0-12-006651-3

CURRENT TOPICS IN DEVELOPMENTAL BIOLOGY

serial editors

A.A. Moscona and Alberto Monroy

From the Reviews of Previous Volumes:

"This series of annual volumes has been excellent from its beginning, and this latest volume maintains that tradition."

—QUARTERLY REVIEW OF BIOLOGY

Volume 23
Recent Advances in Mammalian Development

volume editors

Anne McLaren and Grigorio Siracusa

This volume includes a closer look at some specific developmental topics: sex determination, the behavior of fetal germ cells, the development of muscle, and trophoblast as an example of an extraembryonic lineage. The introductory chapter sets the whole in the context of the spectacular rise of mammalian development over the past few decades, and the genetic and molecular developmental avenues that lead us invitingly into the future.

1988, 268 pages, $59.00
ISBN: 0-12-153123-6

NEW SPIRALBOUND LAB MANUAL!

METHODS IN PLANT MOLECULAR BIOLOGY

Mary A. Schuler and Raymond E. Zielinski

This lab manual introduces students to a diversity of molecular techniques needed for experiments with plant or animal cells *in vivo*. Those included have been perfected and are now presented for the first time in a useable and teachable form. Because the manual integrates protein, RNA, and DNA techniques it will serve students, teachers, and researchers of plant physiology, biophysics, and animal molecular biology who have never had previous experience handling recombinant DNA or even purified proteins.

The manual includes eight basic experiments which can be used collectively or individually. Key features of the manual include:

- Protein, RNA, and DNA techniques
- Experiments that have been student-tested for three years
- Blueprints for setting up gel rigs
- Comprehensive course schedule outlining individual procedures to be finished in each lab segment
- Definite set of goals to be achieved for each experiment
- Course can be tailored to suit the needs of the individual instructor

September 1988, c. 166 pages
$29.95 (tentative)
